

HIGH PERFORMANCE DOCK SEAL WITH HEAD PAD (TPHP)

Durable, pivoting head pad

Unique backerless construction creates lower pressure when trailer backs in for reduced friction and wear. Integral poly stabilizing panel and beveled design help prevent sagging caused by severe inward and downward trailer pressure.

Replaceable corner wear boots

Tough, pleatless wear boots protect corners of seal where pressure and friction are greatest. Constructed of high-strength, friction-resistant DURATHON™ fabric for longest life. Velcro-attached boots can be easily and economically replaced when needed.

FIREFIGHTER™ protection

Triple-layer foil heat-dissipation system in head pad prevents burning from the heat build-up of compressed trailer marker lights. Additional layers of material also increase wear resistance.

36-month money-back guarantee on header

Built to the industry's highest standards for quality and durability, your satisfaction with the performance of the Platinum Series High Performance head pad is guaranteed.

Unit shown with optional PitMaster™ Under-leveler Seal

Free-float pivoting motion protects against head pad "pop-off" when yard jockeys are in use.

HIGH PERFORMANCE DESIGN ENSURES LONG LIFE AND EASY MAINTENANCE IN HARSHTEST LOADING DOCK CONDITIONS.

Frommelt's PLATINUM SERIES High Performance Dock Seal features advanced engineering and state-of-the-art technology and materials to deliver a seal that stands up better against the abuses of high-traffic loading docks, yard jockey use, decline approaches and other situations that can damage or destroy ordinary dock seals. Plus, easily-replaceable wear components keep the units looking and performing better, longer, for lifetime value that can't be matched. Choose Frommelt—there is a difference.

PLATINUM SERIES™

High performance header holds up like no other.

Ordinary dock seal head pads can quickly be damaged when installed in extra-challenging loading dock environments, such as those with decline approaches, yard jockeys and/or a high volume of trailer traffic. Frommelt's beveled, backerless High Performance head pads are built to resist and withstand the extreme downward and inward pressure of trailers coming in at severe angles that causes other head pads to tear and sag. Plus, the pivoting head pad is free to float, rather than pop off, when yard jockey drivers lower and raise trailers for movement. Finally, corners of the head pad and tops of side pads are protected with supertough, friction-resistant DURATHON™ corner boots for added durability where it's needed most.

Yard jockeys are one source of extreme dock seal wear.

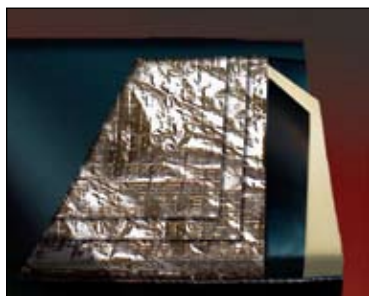

Beveled, backerless, pivoting head pad stands up to abuse that destroys other head pads.

Upgrade your existing dock seals and save money.

If the side pads of your existing dock seals are in good condition, there is no need to replace them when adding a new High Performance head pad. An Upgrade Kit is available that allows for easy installation of a new Platinum Series head pad to your existing side pads.

Replaceable wear components make maintenance and upgrades easy.

FIREFIGHTER™ protection helps keep your facility safe.

Only Frommelt® dock seal headers are built with triple-layer foil heat-dissipation protection inside, to prevent the excessive heat build-up from trailer marker lights that can lead to gradual burning or sudden combustion of dock seal components. Safer than simple fire retardant materials, Firefighter head pads are guaranteed not to burn from the heat of trailer marker lights. For more information on how and why dock seals burn, visit www.dockfires.com.

Complete the seal with PITMASTER™

Seal beneath and around dock levelers to prevent energy loss, reduce AIB "white space," improve dock cleanliness and increase employee comfort. PitMaster Under-leveler Seals are available to fit a wide variety of leveler types.
